

## Print Module

The Print module in Adobe® Photoshop® Lightroom® has layout settings and controls for printing your photos and contact sheets. It also includes settings that let you overlay your images with text, photo information, and other print options. Lightroom features several premade templates that have different layouts for various types of print output. You can modify their settings and save the new settings to create custom templates.

**A.** Template Browser | **B.** Panels for specifying layout and output options  
**C.** Show Previous Page and Show Next Page buttons | **D.** Page number

## ***The Print module includes the following panels:***

- **Preview** - Displays the layout of a template. Moving the pointer over a template name in the Template Browser displays the page layout for that template in the Preview panel.
- **Template Browser** - Selects or previews the layout for printing photos. Templates are organized into folders that include Lightroom presets and user-defined templates.
- **Collections** - Displays the collections in the catalog.
- **Layout Engine** - Indicates whether the selected template is a Grid or Picture Package layout. Grid layouts let you print one or more photos at the same size on one or more pages. Picture Package layouts let you print one photo in various sizes on one or more pages.
- **Image Settings** - Determines how the photos fill the cells in a page layout.
- **Layout** - (grid layouts) Specifies margins, number of rows and columns, and cell size in a Grid page layout.
- **Guides** - (grid layouts) Shows rulers, bleeds, margins, image cells, and dimensions in a Grid page layout.
- **Rulers, Grid & Guides** - (picture package layouts) Determines whether and how rulers, page grid, and bleeds appear in Picture Package layouts.
- **Cells** - (picture package layouts) Adds cells and pages to Picture Package layouts.
- **Overlays** - Specifies the text and other items that get printed with the photos.
- **Print Job** - Specifies the print resolution, color management, and sharpening.

The Print module also has controls for opening the Print Setup dialog box (Windows) or Page Setup dialog box (Mac OS) to set the print orientation and paper size, and for opening the Print Setup dialog box (Windows) or Print dialog box (Mac OS) to choose a printer and specify printer driver settings.
